

Vertigo Check & Go

Safety Gloves from Honeywell

Designed for Industry

- Automotive
- Maintenance
- Logistics
- Utilities
- Paper recycling
- Glass recycling

Honeywell

New Vertigo Check & Go gloves combine high-performance-polythene (HPPE) fibre with a highly visible numbers system to deliver best performance, safety, comfort and durability.

Designed to help safety managers ensure that workers are wearing the right protection for their level of cut injury risk.

The new Vertigo Check & Go gloves are reinforced with Honeywell's innovative Spectra® fibre, one of the world's strongest and lightest manmade fibres, commonly used in high strength fishing lines and bullet resistant body armours.

Featuring seamless and lightweight polyamide (cut 1), Spectra® (cut 3) and Spectra® + glass fibre (cut 5) liners with PU or nitrile coating.

Cut level resistance is clearly marked on the top of the glove for better visualisation, and enhanced safety.
